

PRODUCT GUIDANCE SHEET

PLASTIC AND RUBBER DRESSING GEL

OVERVIEW:

Incredibly versatile silicone dressing gel, gives a long-lasting high gloss shine with a water-repellent finish to plastics and rubber.

The unique non-hazardous and solvent-free formulation makes it suitable for most interior and exterior plastics and safe to use on engine bay plastics and rubber hoses, etc.

Applied to plastic bumpers and trim panels it revitalises and brightens the plastic to give a long lasting wet-look finish and water repellence that helps to reduce the build up of dirt keeping the surfaces cleaner for longer.

Plastic and Rubber Dressing Gel works fantastically as a tyre dressing as it can be applied directly to wet tyres removing the need for drying and as it is a light gel it can be applied quickly without runs or drips.

APPLICATIONS:

For dressing interior and exterior plastics, engine bay plastics, mud flaps and tyres.
Not suitable for use on rubber mats or plastic flooring as they may become slippery.

DIRECTIONS FOR USE:

Use neat.

For best results apply to a freshly cleaned surface, works fine on wet surfaces so can be used immediately after cleaning.

Apply a light coat evenly using a cloth, sponge or brush and allow to dry.

For tyres we recommend using a paintbrush to apply and to allow the gel to dry completely before moving the vehicle to prevent any flick-off onto surrounding paintwork.

HEALTH & SAFETY:

In compliance with EC regulation No. 1272/2008 and its amendments, this mixture does not present a physical hazard.

See MSDS for further information.
